## Our company

PAGEN, which has been operating since 1998, is one of the leading Polish manufacturers of uPVC and aluminum joinery systems. While manufacturing windows, entrance doors, terrace doors, roller shutters and garage doors we rely on strategic cooperation with well-known profile manufacturers, such as SCHÜCO and SALAMANDER in the uPVC products segment, SCHÜCO and ALUPROF in the Aluminum.

The hardware is supplied by WINKHAUS, whereas low-emission glazing units are provided by PILKINGTON. Garage doors and roller shutter manufactured by PAGEN are equipped with Smart Home systems and also Somfy and Sommer drives.

Our uPVC and Aluminum products are valued in Poland, Germany, Austria, Italy, the Netherlands, Belgium, France, Ireland, Great Britain and even in Canada, USA and Australia. The development of our own network of showrooms and international activity contributes to strengthening the position of the Polish window and door joinery industry, which is the export leader in Europe.

## MB-FERROLINE

ENERGY EFFICIENCY

RAL

GASKETS

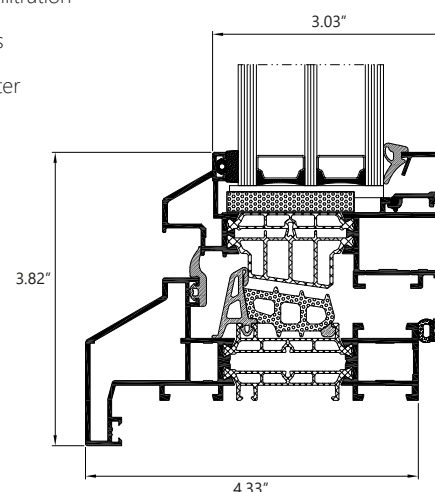

FRAME DEPTH  
(3.03-4.33")

### Features and benefits:

- Classic window look
- Two thermal insulation profile options available: ST (Standard) and SI (Super Insulated)
- Excellent tightness against water penetration and air infiltration
- Possibility of manufacturing anti-burglary constructions
- Constructions perfectly matching the building's character

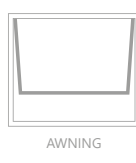

TILT AND TURN,  
OPENING INWARD

## MB-SR50N

ENERGY EFFICIENCY

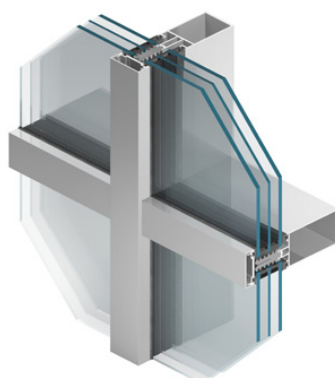

RAL

GASKETS

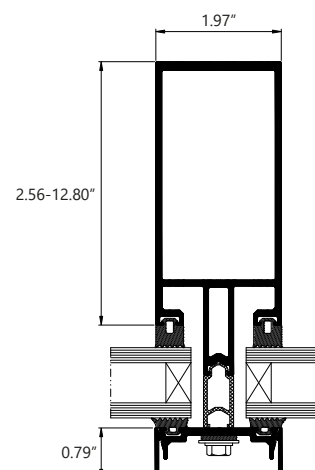

MULLIONS DEPTH  
(1.97-12.80")

### Features and benefits:

- Compliant with ASTM guidelines and Florida Building Code TAS 201-94, TAS 202-94, and TAS 203-94
- Aesthetic facade variants and a range of overlay profiles in various shapes allow for numerous facade design options
- A continuous thermal break ensures proper thermal insulation
- Capability of bending profiles and constructing arched structures

## SK, SKE

The system is designed mainly for existing buildings. The advantage of roller shutters is that they do not directly integrate with the window, thus requiring interference with the current state of the building. Thanks to this, the decision to install roller shutters in the adaptive system can be made at any time. The Solution, due to the shape of the box, perfectly presents itself especially in an alcove.

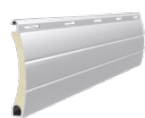

## SP, SP-E

Flush-mounted systems are mainly designed for new buildings. However, once the necessary modifications to the lintel are made, these products can also be installed in existing buildings. It is important to plan the use of such solutions, this also applies to the installation method, as early as at the building design stage to allow for the effective use of the product's functional values.

## SKT Opoterm

Top mounted roller shutters are characterized by the direct seating of the shutter box on the window frame. These boxes are made of high quality uPVC elements, and their interior has been additionally insulated. It is a very universal and versatile product, allowing installation without built-in, with partial or complete installation.

## Venetian Blinds

The structure of the blind system is made of extruded aluminum, ensuring durability and resistance to weathering. Painting the visible elements of the blinds in any color from the RAL palette allows you to achieve a visual match with the elements of the facade or window colors. An unquestionable advantage of this solution is the lack of interference with the current state of the building.

Laths Z90

Laths C80

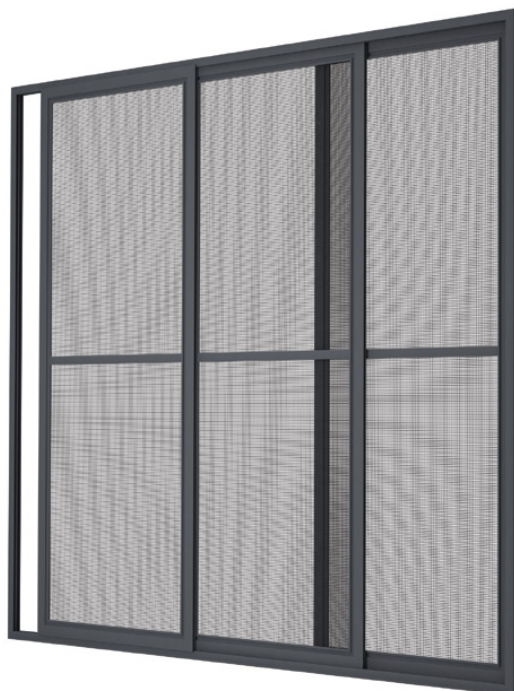

# Windows Covers

Possibility of installation in a three-row system.

The additional reinforcement of the mosquito net, sash is mounted by means of a snap-in connection. Thanks to this element, in a quick and easy way it is possible to increase the surface area of sash.

The frame and sash of the mosquito net are assembled by means of internal corners, which are characterized by durability and aesthetics.

The low rail solution works perfectly with sliding doors, where the so-called low threshold is used.

## MRP

### Sliding mosquito net

System protects the interiors against insects and are used in large glass balcony bays, terraces and verandas. Mosquito net moves along the upper and lower running rail. In the bottom part of the screen there's a roller that allows a smooth adjustment of the angle of each opening element. Additional reinforcement, mounted using snap-fits allows to fabricate larger size frames.

## MPH Harmony

### Pleated mosquito net

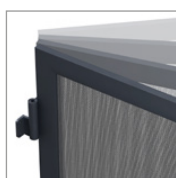

The special pleated net, which folds into an harmonic shape when closed, is designed to provide space-saving opening. The system, concealed in the side profile, is ideal for installation on terrace doors and balcony niches up to 13 feet wide. The construction is made of extruded aluminum, which makes it weather-resistant and can be painted in any RAL colour of your choice. The universal handle allows the mosquito net to be easily used by both children and adults. Pleated mosquito net system is designed to work smoothly with the SLK 45, GK-R, GK-P and UPK 90 roller shutter systems, using the PPMO 53 guide rail PPMO 53 guide bar.

### Hinged mosquito net

### Fixed mosquito net / roller

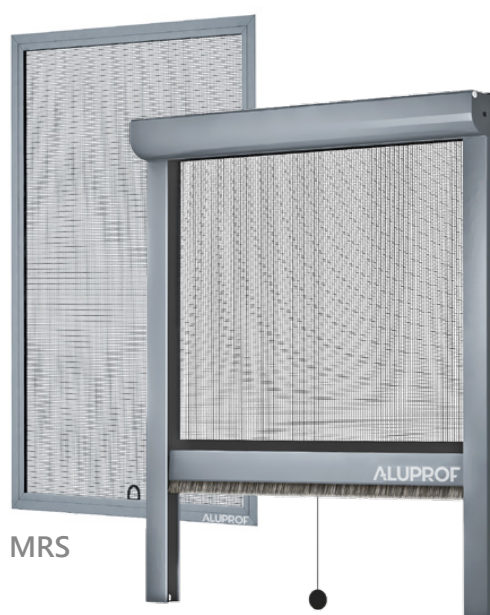

MRO

Self-closing hinge.  
Simple adjustment of the spring  
tension by means of an allen key.

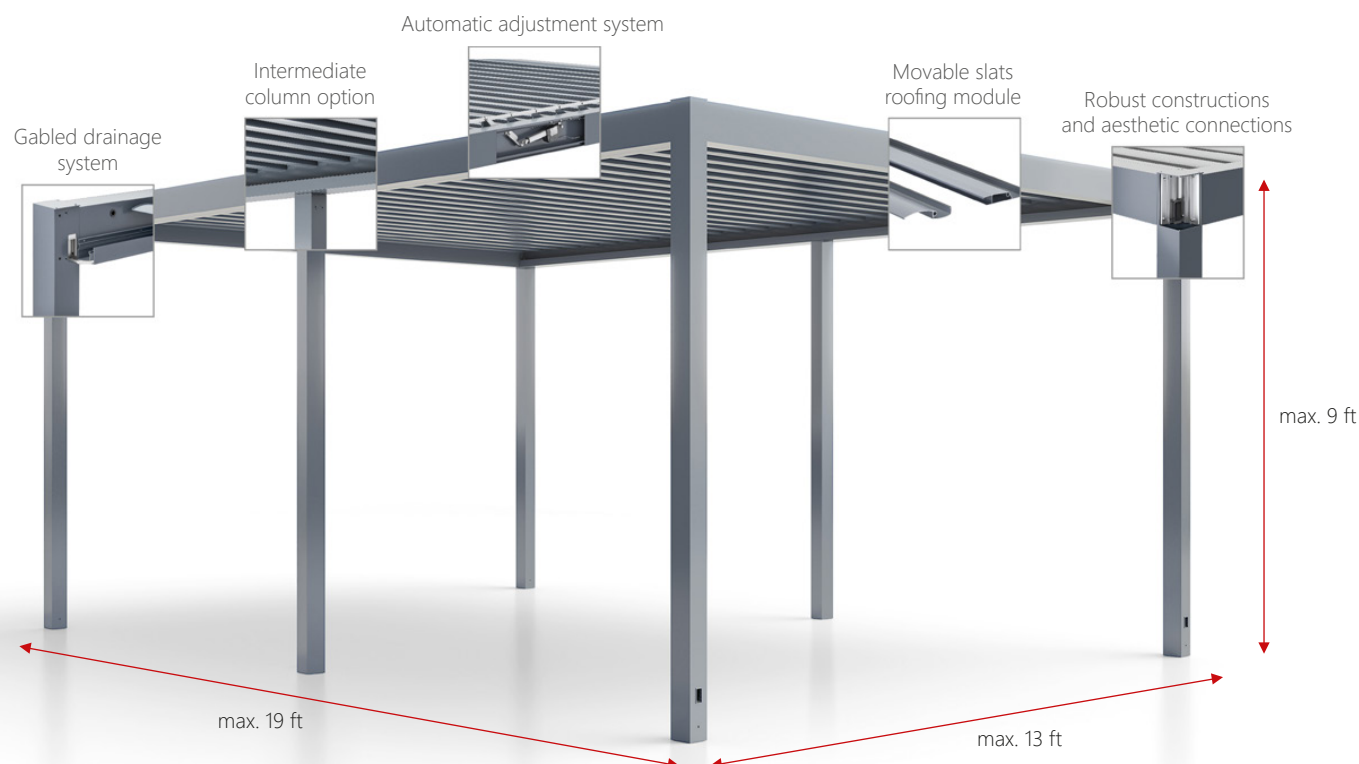

Available in two opening variants:  
one with ergonomic handle  
and one with a specially profiled fitting.

MZN

# Pergolas

## MB-OpenSky 120

The clever design of the MB-OpenSky 120 pergola makes it durable and resistant to weather conditions. The product has been equipped with a gabled drainage system, allowing rainwater to be effectively drained from the roof inside the entire surface of the column. Tests have shown that for maximum dimensions, i.e. l. 19 ft × w. 13 ft × h. 9 ft, the product meets the following strength parameters:

- Snow load up to 14 lb/ft²
- Wind load up to 68 mph
- Water discharge capacity of up to 15 gal/min

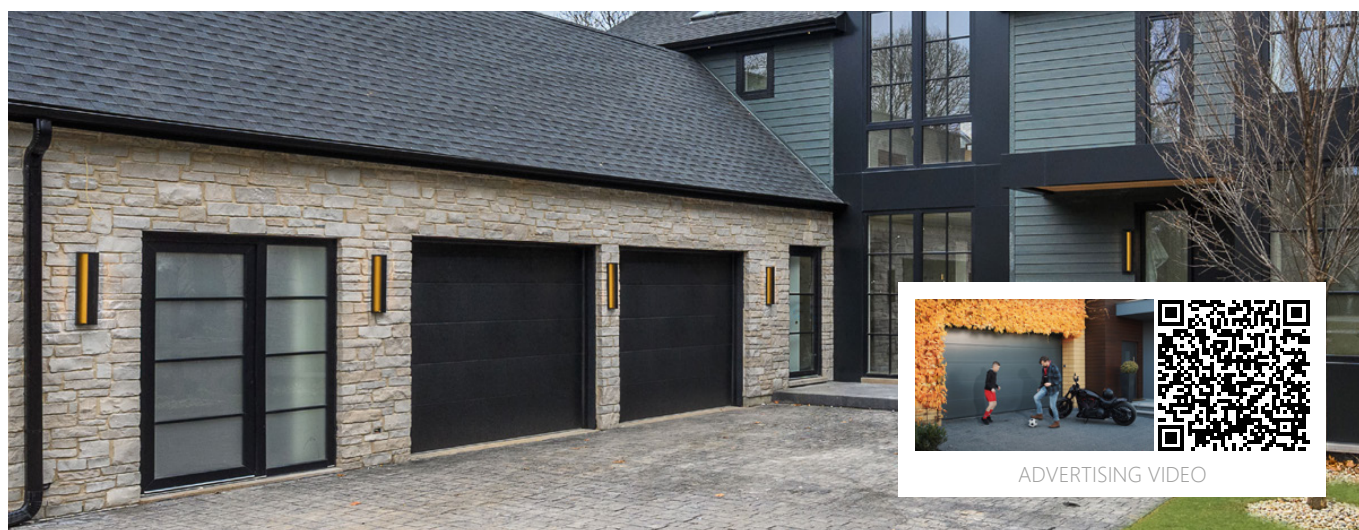

## PAGEN Genius

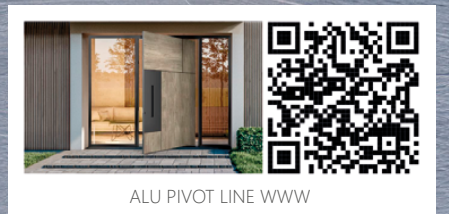

### Quality Assurance

The garage door is one of the most important finishing touches. It should be solid, secure and match to the architecture of the building. Structural reinforcement to ensure stability, a tension spring cover to ensure safety of use, sealing along the entire perimeter of the door – these are just selected features of PAGEN Genius – the garage door offering a guarantee of quality.

### A wide range of color options

Analyzing the requirements of our customers who expect durable, aesthetic and original design. We offer gates color match the trends of contemporary architecture. We paint gates in 200 colors of the RAL palette. Offering several dozen veneers which certainly allow you to match the garage door to other elements of finishing facility – including windows, doors and blinds.
